

Location of Known Private Drinking Water Supply Wells

Holyoke – In 2004, Holyoke Health Department supplied information on the portion of the city where private drinking water wells are likely to be located. This area is shown on *Figure 1* contained in *Appendix N*. The Department has been contacted during each subsequent year to update this information. As of January 2011, approximately seven additional private drinking water wells were installed within the area shown on *Figure 1*, since this area of the city does not have public drinking water service.

Herbicide application crews will attempt to field-identify other private drinking water wells in this area.

Chicopee – The Chicopee Health Department was contacted during 2004 to determine if any drinking water wells are present in the area where HG&E is proposing vegetation management. No known wells were reported. Subsequent annual discussions with the Department indicated that no private drinking water wells were installed or proposed for installation in this area since 2004.

South Hadley -- The area in South Hadley where vegetation management is proposed includes no residences, and extensive ground survey has not identified evidence of any private drinking water wells in the vicinity of the project.
